The software described in this document is furnished under a license agreement. The software may be used or copied only under the terms of the license agreement. No part of this manual may be photocopied or reproduced in any form without prior written consent from The MathWorks, Inc.

FEDERAL ACQUISITION: This provision applies to all acquisitions of the Program and Documentation by, for, or through the federal government of the United States. By accepting delivery of the Program or Documentation, the government hereby agrees that this software or documentation qualifies as commercial computer software or commercial computer software documentation as such terms are used or defined in FAR 12.212, DFARS Part 227.72, and DFARS 252.227-7014. Accordingly, the terms and conditions of this Agreement and only those rights specified in this Agreement, shall pertain to and govern the use, modification, reproduction, release, performance, display, and disclosure of the Program and Documentation by the federal government (or other entity acquiring for or through the federal government) and shall supersede any conflicting contractual terms or conditions. If this License fails to meet the government's needs or is inconsistent in any respect with federal procurement law, the government agrees to return the Program and Documentation, unused, to The MathWorks, Inc.

Trademarks

MATLAB and Simulink are registered trademarks of The MathWorks, Inc. See www.mathworks.com/trademarks for a list of additional trademarks. Other product or brand names may be trademarks or registered trademarks of their respective holders.

Patents

MathWorks products are protected by one or more U.S. patents. Please see www.mathworks.com/patents for more information.

What Is Code Generation from MATLAB?

You can generate C/C++ and MEX code automatically from MATLAB® algorithms using the MATLAB® Coder™ product and from MATLAB Function blocks in Simulink® models.

With this capability, you can design, implement, and test software for embedded and desktop applications in the MATLAB environment, then automatically translate the algorithms to efficient C/C++ code for deployment to desktop and embedded systems. More than 350 MATLAB toolbox functions support code generation.

For more information, see “About Code Generation from MATLAB Algorithms” in the Code Generation from MATLAB documentation.

When to Generate Code from MATLAB Algorithms

Consider generating code from MATLAB algorithms to:

- Produce readable, efficient, and compact code from MATLAB algorithms for deployment to desktop and embedded systems.
- Generate MEX functions from MATLAB algorithms to:
 - Accelerate your MATLAB algorithms.
 - Verify generated C code within MATLAB.
- Integrate MATLAB code into Simulink.
- Speed up fixed-point MATLAB code.
- Integrate custom C code into MATLAB.
- Generate hardware description language (HDL) from MATLAB code.

For the function, command, or block that applies, see “Which Code Generation Feature to Use” on page 1-4.

Which Code Generation Feature to Use

To...	Use...	Required Product	To Explore Further...
Generate MEX functions for verifying generated code	codegen function	MATLAB Coder	Try this in “Generating MEX Functions from MATLAB Code at the Command Line” in the MATLAB Coder documentation
Produce readable, efficient, and compact code from MATLAB algorithms for deployment to desktop and embedded systems.	MATLAB Coder user interface	MATLAB Coder	Try this in “Generating C Code from MATLAB Code Using the MATLAB Coder Project Interface” in the MATLAB Coder documentation
	codegen function	MATLAB Coder	Try this in “Generating C Code from MATLAB Code at the Command Line” in the MATLAB Coder documentation
Generate MEX functions to accelerate MATLAB algorithms	MATLAB Coder user interface	MATLAB Coder	See “Accelerating MATLAB Algorithms” in the MATLAB Coder documentation
	codegen function	MATLAB Coder	
Integrate MATLAB code into Simulink	MATLAB Function block	Simulink	Try this in “Tutorial: Integrating MATLAB Code with a Simulink Model for Tracking a Moving Object” in the Simulink documentation

To...	Use...	Required Product	To Explore Further...
Speed up fixed-point MATLAB code	<code>fiaccel</code> function	Fixed-Point Toolbox™	Learn more in “Code Acceleration and Code Generation from MATLAB for Fixed-Point Algorithms” in the Fixed-Point Toolbox documentation.
Integrate custom C code into MATLAB and generate efficient, readable code	<code>codegen</code> function	MATLAB Coder	Learn more in “Generating C/C++ Code from MATLAB Code” in the MATLAB Coder documentation
Integrate custom C code into code generated from MATLAB	<code>coder.ceval</code> function	MATLAB Coder	Learn more in <code>coder.ceval</code> in the MATLAB Coder documentation
Generate HDL from MATLAB code	MATLAB Function block	Simulink and Simulink® HDL Coder™	Learn more at www.mathworks.com/products/slhdlcoder

When Not to Generate Code from MATLAB Algorithms

Do not generate code from MATLAB algorithms for the following applications. Use the recommended MathWorks® product instead.

To...	Use...
Deploy an application that uses handle graphics	“MATLAB Compiler™”
Use Java™	“MATLAB® Builder JA”
Use toolbox functions that do not support code generation	Toolbox functions that you rewrite for desktop and embedded applications
Deploy MATLAB based GUI applications on a supported MATLAB host	“MATLAB Compiler™”
Deploy web-based or Windows® applications	<ul style="list-style-type: none"> • “MATLAB® Builder NE” • “MATLAB® Builder JA”
Interface C code with MATLAB	MATLAB mex function

Benefits of Generating Code from MATLAB

Generating code from MATLAB for desktop and embedded systems allows you to perform your software design, implementation, and testing completely within the MATLAB workspace. In addition, it enables you to generate efficient, readable, and compact C code automatically from your MATLAB algorithms.

Within the MATLAB development environment, you can:

- Verify that your algorithms are suitable for code generation
- Generate C/C++ code automatically, which eliminates the need to manually translate your MATLAB algorithms and minimizes the risk of introducing errors in the code.
- Modify your design in MATLAB code to take into account the specific requirements of desktop and embedded applications, such as data type management, memory use, and speed.
- Test the generated code and easily verify that your modified algorithms are functionally equivalent to your original MATLAB algorithms.
