Psychology 594

Final Take Home Exercise; Fall 2011

November 4, 2011

Questions I and II are to be done with your chosen proximity matrix (from Michael Lee's web site).

`http://cda.psych.uiuc.edu/multivariate_class_final_2011.zip`

I. (a) From routines available in the Matlab Statistical Toolbox, carry out a complete-link hierarchical clustering and interpret your results. Use at least the following three M-files:

`squareform.m`
`linkage.m`
`dendrogram.m`

(b) From the Cluster Analysis Toolbox M-files:

(i) use `order.m`; `ultrafit.m` (with a complete-link target); `ultrafnd.m` (with `randperm` several times).

(ii) use `ultrafnd_confit.m` (with the order found in (i)),
and `ultrafnd_confnd.m`.

(iii) use `partitionfnd_averages.m`; `partitionfnd_diameters.m`; and then `partitionfit.m` after each.

(iv) use `cent_ultrafnd_confit.m` (with the order found in (i)), and `cent_ultrafnd_confnd.m`.

(v) use `atreefit.m` (with a complete-link target); `atreefnd.m` (with `randperm` several times); `atreedec.m`, and `ultraorder.m`.

(vi) use `consec_subsetfit.m` and `consec_subsetfit_alter.m`.

Again, interpret the results obtained from the various analyses.

II. Carry out multiple restart Monte Carlo on your data using an M-script parallel to `ms_script_yourdata_mds.m`. Interpret the results obtained in relation to the previous cluster analyses in I and II.

III. The data matrix `supreme_court_08_09.dat` gives the number of (non-unanimous) cases (out of 53) that a given pair of Supreme Court justices *dis*agreed on during the 08/09 court term. Thus, the numbers can be treated as dissimilarities. The order of the rows and columns is as follows:

1: Ginsburg
2: Souter
3: Breyer
4: Stevens
5: Kenneday
6: Roberts
7: Alito
8: Scalia
9: Thomas

Using the M-files, `order.m`, `linfitac.m`, and `ultrafnd.m`, evaluate whether a unidimensional scaling (i.e., a "continuous" model) or an ultrametric (a "categorical" model) gives a better fit. Interpret the results of your analyses in terms of the political composition of the court in the 08/09 term. If you wish some background reading, see Adam Liptak, *Roberts Court Shifts Right, Tipped by Kennedy* (*New York Times*, July 1, 2009). The contents of the file `supreme_court_08_09.dat`:

```
 0 11 15 11 26 37 37 35 37
