INTRODUCTION

History

A sample of community members was drawn to serve as a comparison group to those subjects in the patient sample. The community sample was drawn only from communities in Pittsburgh, PA. This sample was such that the distribution of the census tracts in which the subjects in the community sample resided was the same as the distribution of the census tracts in which the subjects in the patient sample resided during the year following discharge. The collaterals in the community sample were interviewed only once. As in the patient sample, the collaterals were questioned about the subjects' behavior in the past 10 weeks.

Organization

All variables in this interview correspond to data that were collected in the patient sample. The variables in this that begin with the letter "f" correspond directly to variables contained in the Subject Follow-up 1 interview (those variables will begin with the letter "a". All other variable names are in direct correspondence with variables contained in either of the subject baseline interviews.

Notes

In some cases (especially in violence screens), there are multiple repeating variables present in the coding manual. Throughout each of the interviews, variable information was often collected in grid format. Whenever there are two variable names listed under the same heading and the names are separated by the word "to" (e.g., v2.2.1b to v2.2.7b), this represents a repeated variable. Variables will always repeat in ascending numerical order throughout the specified range. Throughout the coding manuals, references are commonly made to a particular sets of codes (e.g., See CRIME CLASSIFICATION CODES). These code sheets are located in the MAC CODES folder.
