INTRODUCTION

History

The subject baseline data for the MacArthur Risk Assessment Study was collected in two separate interviews: clinical and research. Each of these interviews was conducted while subjects were in the hospital. The clinical interview consisted of a review of the subject's chart, coupled with a face-to-face interview. The purpose of the clinical interview was to determine the presence of selected clinical diagnoses for the subject to determine eligibility for the study. The clinical interview was also used to assess level of functioning and administer other clinical measures. The research interview obtained a wide array of baseline measures including historical data and was conducted by a research interviewer.

Organization

All subject baseline interview data (clinical and research) are contained in one SPSS data file named "Baseline Subject Data". For the sake of clarity and brevity, two separate code books have been prepared that accompany this data set. The "clinical" code book contains all clinical interview variables, as well as selected variables from the study's tracking program. The "research" code book contains all research interview variables, as well as variables which have been calculated/computed from the subject baseline data.

Notes

In some cases (especially in violence screens), there are multiple repeating variables present in the coding manual. Throughout each of the interviews, variable information was often collected in grid format. Whenever there are two variable names listed under the same heading and the names are separated by the word "to" (e.g., v2.2.1b to v2.2.7b), this represents a repeated variable. Variables will always repeat in ascending numerical order throughout the specified range.

Throughout the coding manuals, references are commonly made to a particular sets of codes (e.g., See CRIME CLASSIFICATION CODES). These code sheets are located in the MAC CODES folder.

NOTE: A value is only coded for either the “a” question or the “b” question - NOT BOTH - depending upon the biological/not biological nature of the relationship between the subject and the person to whom the question refers

NOTE: All questions in italics do not have values associated with them - Rather, a “yes” response to each prompts the interviewer to ask the question of “How often?” to assess the frequency of the question asked
