THE MACARTHUR RISK ASSESSMENT STUDY

COMMUNITY SAMPLE - COLLATERAL INTERVIEW

Coding Manual

TABLE OF CONTENTS

INTRODUCTION

History

A sample of community members was drawn to serve as a comparison group to those subjects in the patient sample. The community sample was drawn only from communities in Pittsburgh, PA. This sample was such that the distribution of the census tracts in which the subjects in the community sample resided was the same as the distribution of the census tracts in which the subjects in the patient sample resided during the year following discharge. In addition to living in a specified census tract, the community respondent had to have lived at the current address for at least 2 months, be between the ages of 18 and 40, and be of either white or African-American ethnicity.

The subjects in the community sample were interviewed only once. As in the patient sample, the subjects and their collaterals were questioned about the subjects' behavior in the past 10 weeks. Official arrest records were also obtained.

Notes

In some cases (especially in violence screens), there are multiple repeating variables present in the coding manual. Throughout each of the interviews, variable information was often collected in grid format. Whenever there are two variable names listed under the same heading and the names are separated by the word "to" (e.g., v2.2.1b to v2.2.7b), this represents a repeated variable. Variables will always repeat in ascending numerical order throughout the specified range.

Throughout the coding manuals, references are commonly made to a particular sets of codes (e.g., See CRIME CLASSIFICATION CODES). These code sheets are located in the MAC CODES folder.
